# 1 MySQL Community Server

Installation steps (for Microsoft Windows Platform):

1. Download MySQL Community Server 5.1 installation file appropriate for the platform in your computer from the webpage <http://dev.mysql.com/downloads/mysql/> .

Generally Available (GA) Releases

Development Releases

Rectangular Snip

## MySQL Community Server 5.1.51

Select Platform:

Microsoft Windows

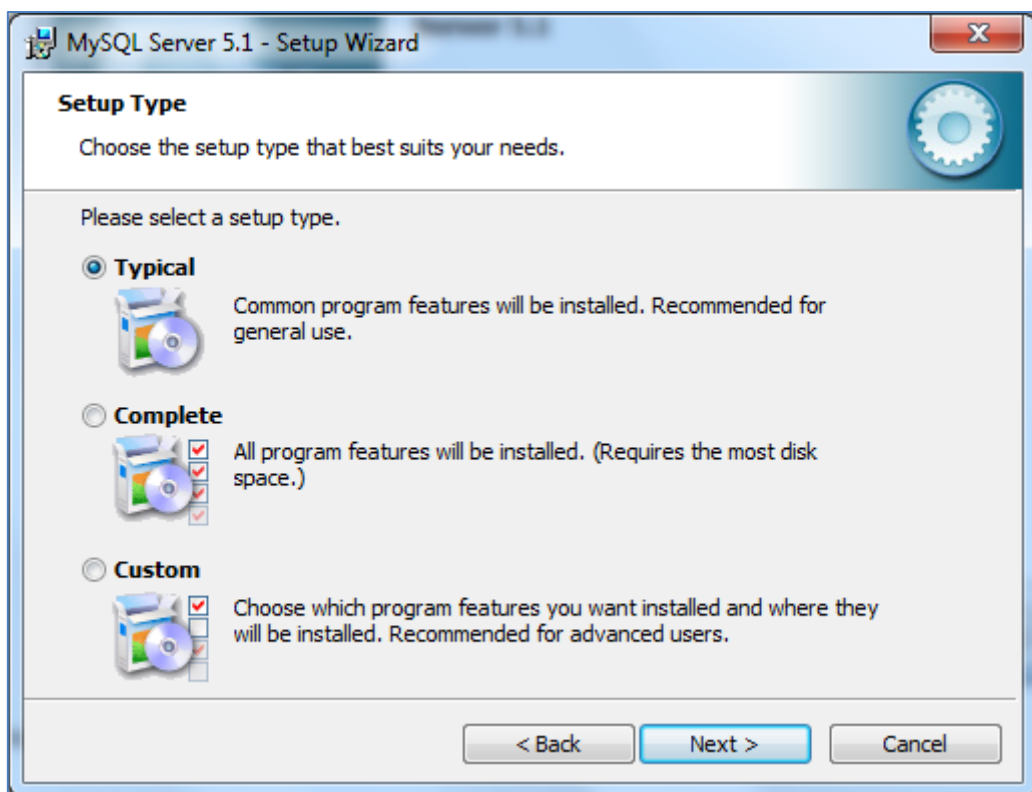

Select

<b>Windows (x86, 32-bit), MSI Installer</b> (mysql-5.1.51-win32.msi)	5.1.51	105.9M	<a href="#">Download</a>
MD5: 1eccd54da2caa09dbf4d65e3012c23df			
<b>Windows (x86, 32-bit), MSI Installer Essentials - Recommended</b> (mysql-essential-5.1.51-win32.msi)	5.1.51	38.9M	<a href="#">Download</a>
MD5: 1e2553aea6fb480f107b7805e6aab6dc			
<b>Windows (x86, 64-bit), MSI Installer Essentials - Recommended</b> (mysql-essential-5.1.51-winx64.msi)	5.1.51	31.5M	<a href="#">Download</a>
MD5: 9e9e4ea157d6b6d592ee725a30190d0d			
<b>Windows (x86, 64-bit), MSI Installer</b> (mysql-5.1.51-winx64.msi)	5.1.51	99.0M	<a href="#">Download</a>
MD5: 5156a24791751d4f40c6042bcda92c9e			

2. Open installation file for MySQL Community Server and press "Next".

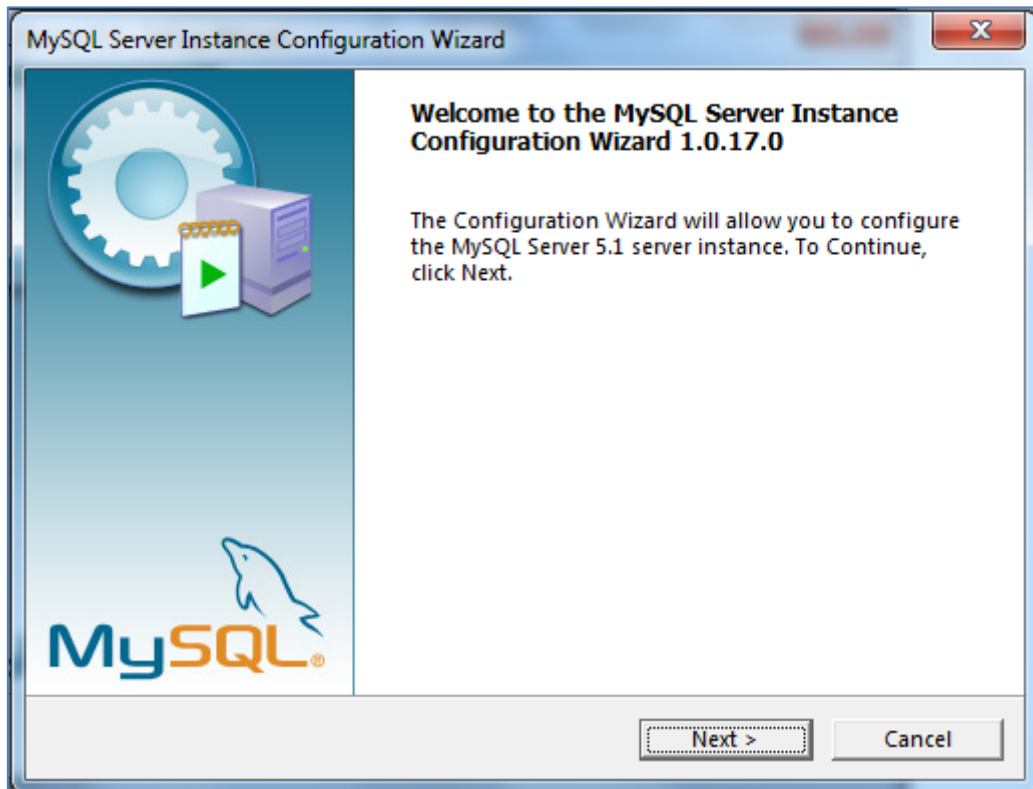

3. Choose "Typical" setup type, click "Next" and "Install".

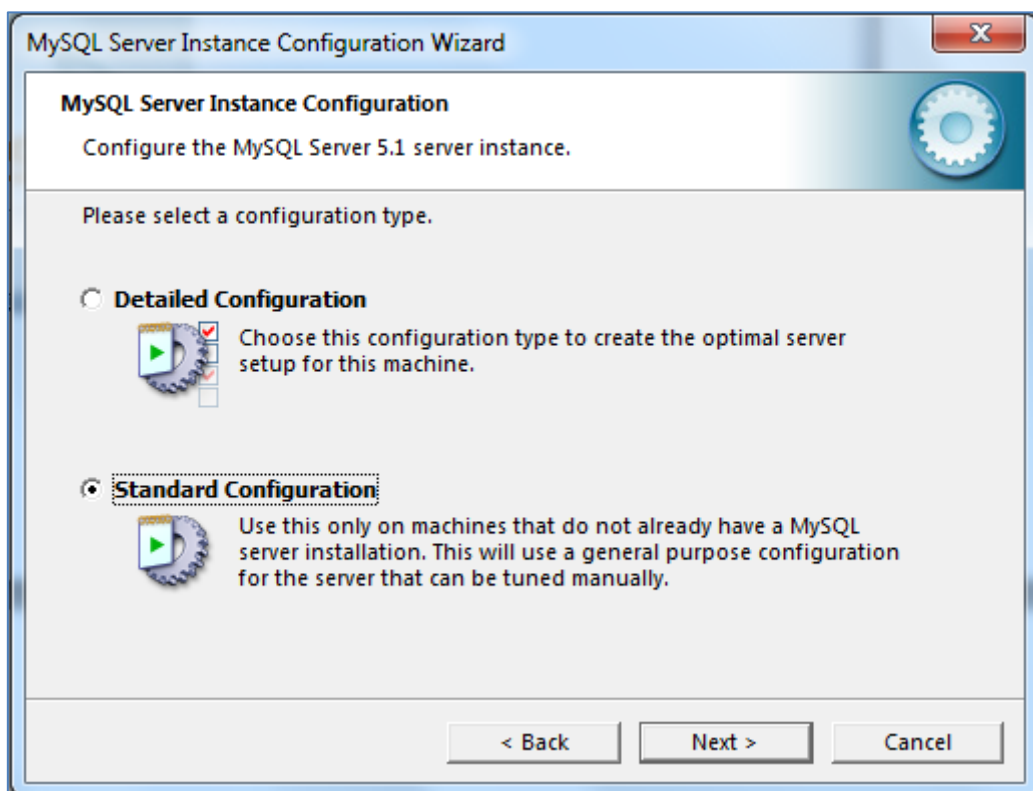

4. After installation process is completed, check "Configure MySQL Server now" and click "Finish".

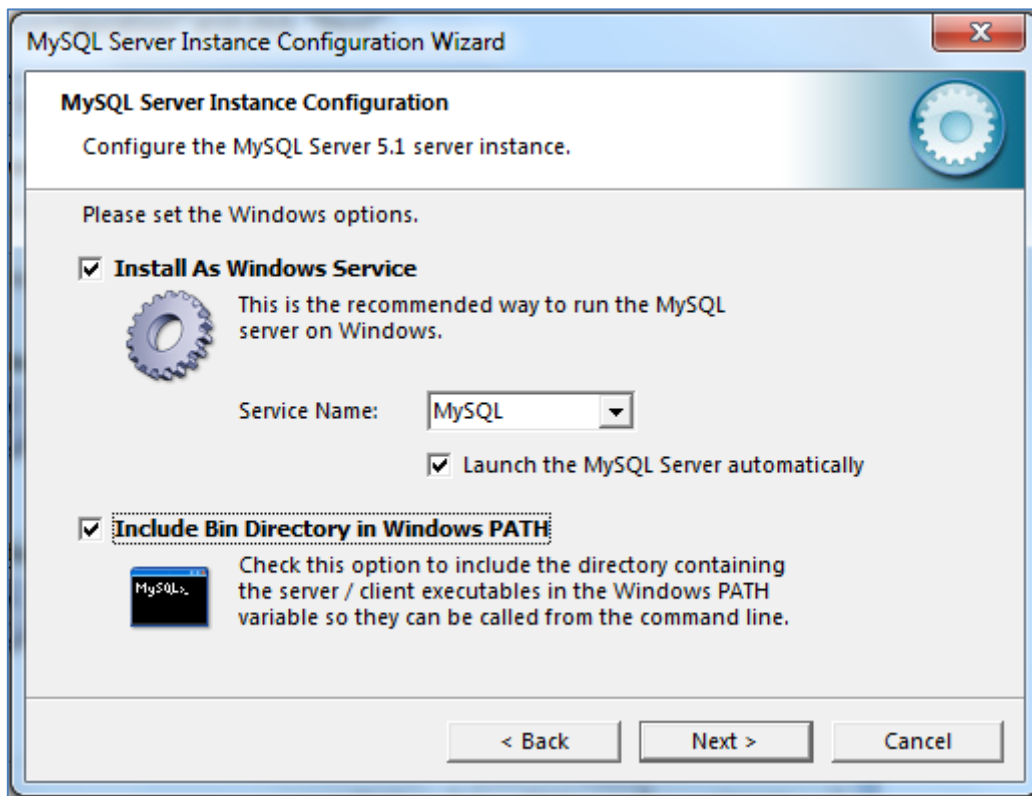

5. In "Configuration Wizard" click "Next".

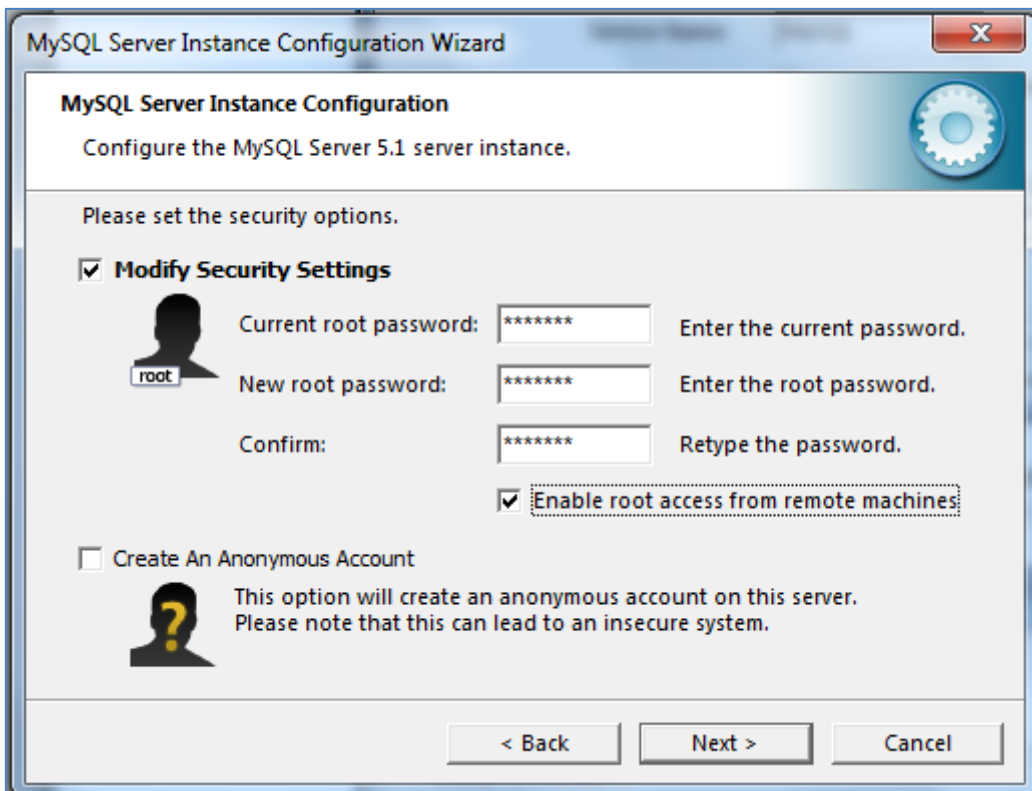

6. Choose "Standard Configuration" and click "Next".

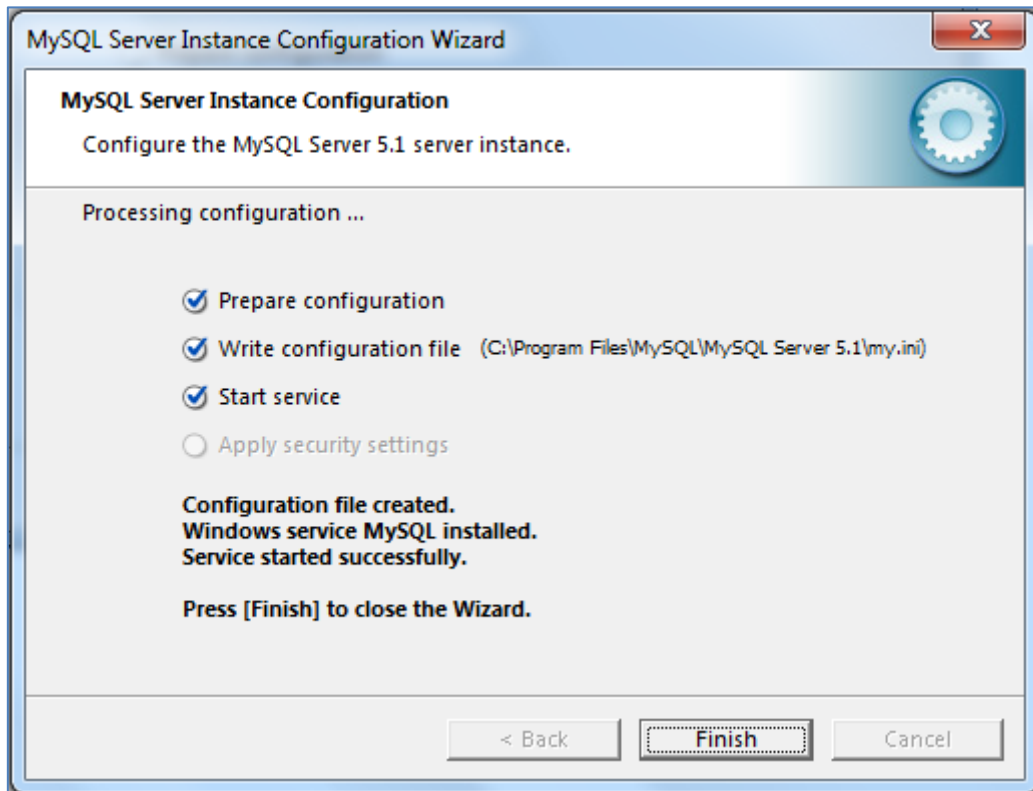

7. We recommend that you check "Install As Windows Service", select service name "MySQL". Check "Launch the MySQL Server Automatically" so it will run service automatically after installation. Check to "Include Bin Directory in Windows PATH" and click "Next".

8. We recommend that you set a long password for the "root" user (and **remember it!**), check "Enable root access from remote machines" and do not create an anonymous account. Click "Next" and then "Execute".

9. After the configuration process is completed click "Finish".

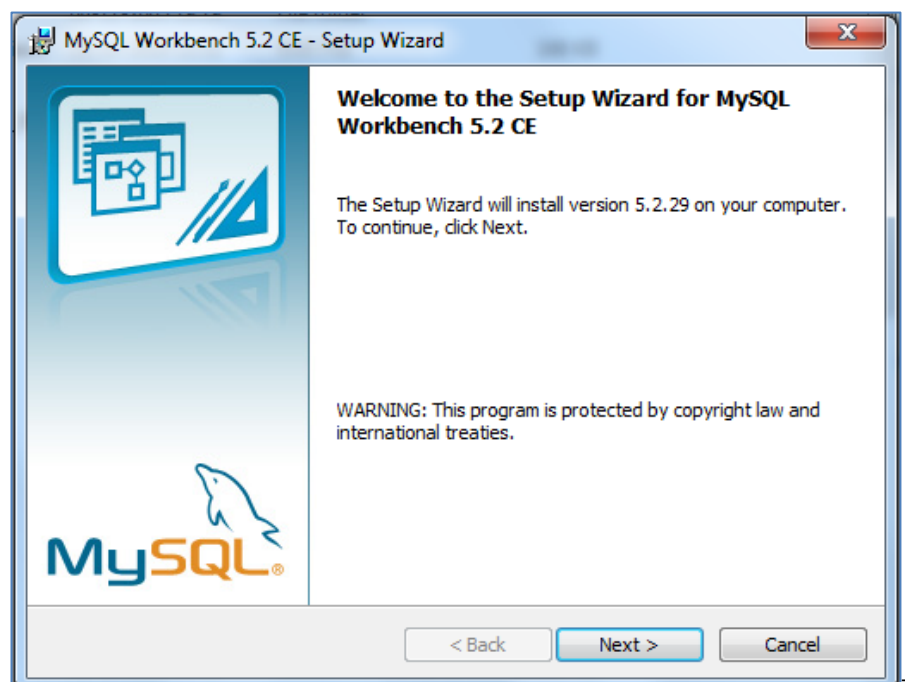

**Note:** If you want to reconfigure MySQL Community Server, click Start > All Programs > MySQL > MySQL Server 5.1 > "MySQL Server Instance Configure Wizard".

## 2 MySQL Workbench

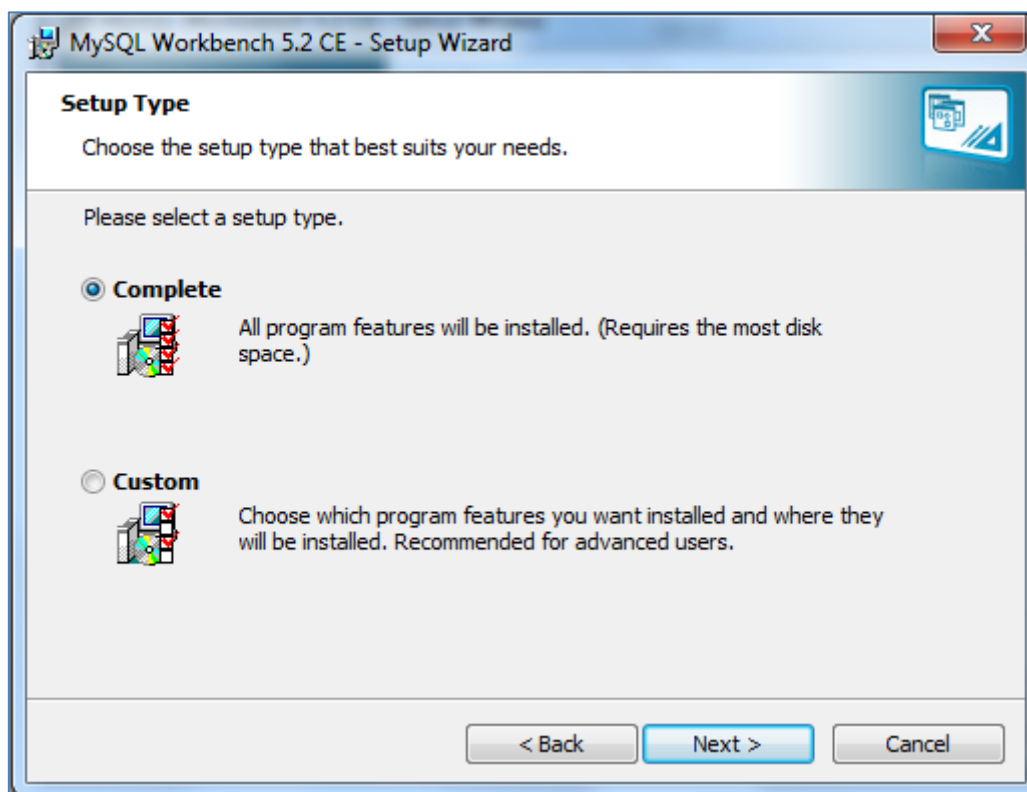

### 2.1 Installation Guide

Installation steps (for Microsoft Windows Platform):

1. Download MySQL Workbench appropriate for your platform from <http://dev.mysql.com/downloads/workbench/5.2.html>.
2. Open installation file for MySQL Workbench and press "Next".

3. Choose "Complete" setup type and click "Next" and "Install".

4. After installation process is completed click "Finish".

Congrats! Installation is finished!

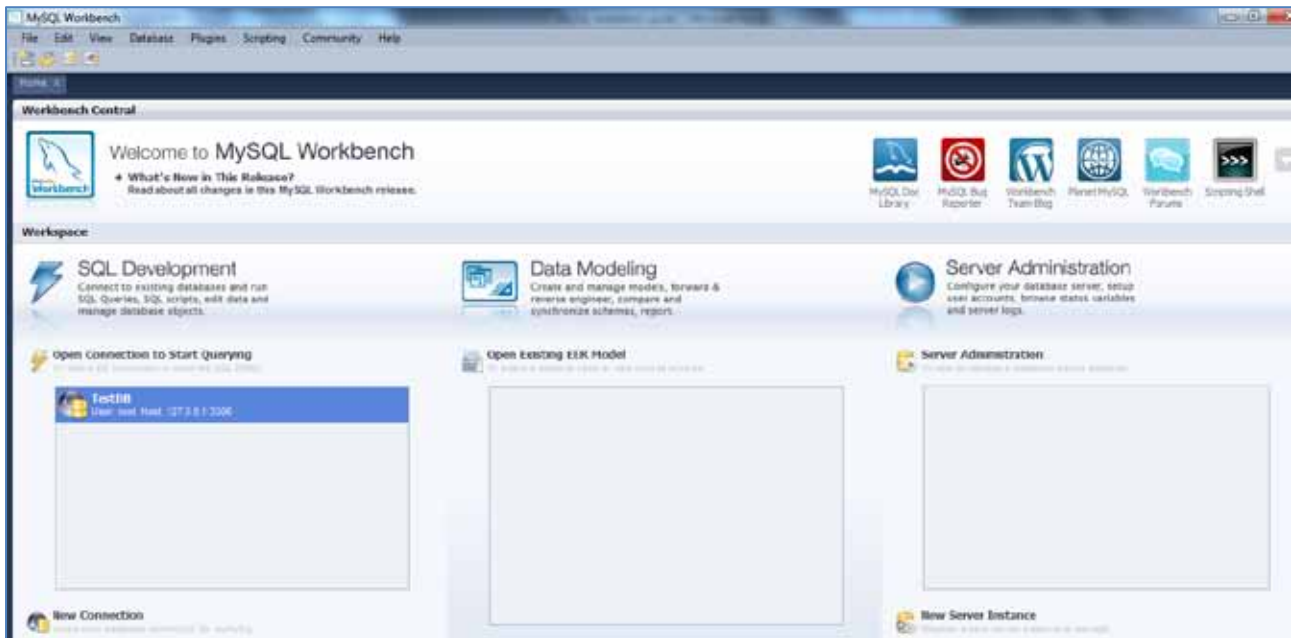

## 2.2 Short User Guide

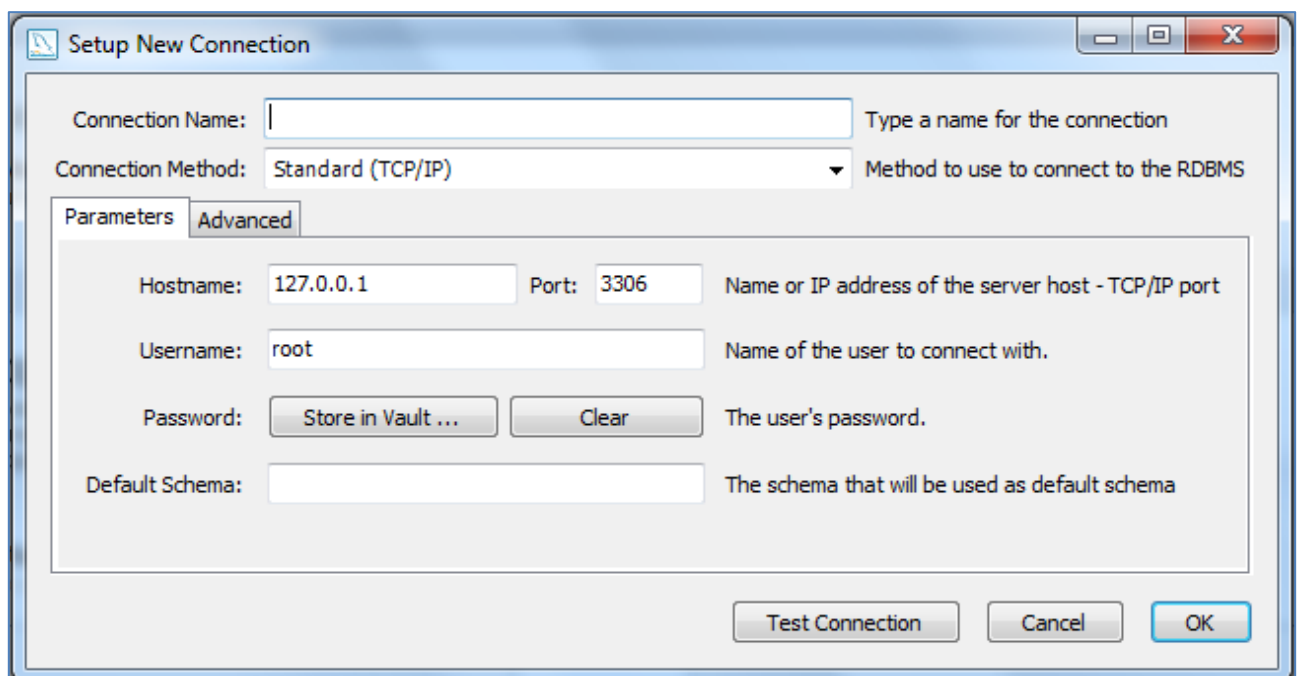

In this section, we explain how to try out your MySQL and Workbench installation using example files you can download from the course webpage.

### 2.2.1 Configure new database connection

1. Launch MySQL Workbench (in your start menu, choose MySQL from your installed programs, and choose Workbench).

2. In Workspace choose "New Connection" option. Setup window will appear.

3. If you installed MySQL Server under default settings, you should not change anything here. (Otherwise enter the name, hostname and port number for the connection.) Enter the password for the "root" user, which you set while installing MySQL Server and click "Test Connection". The following screen will appear.

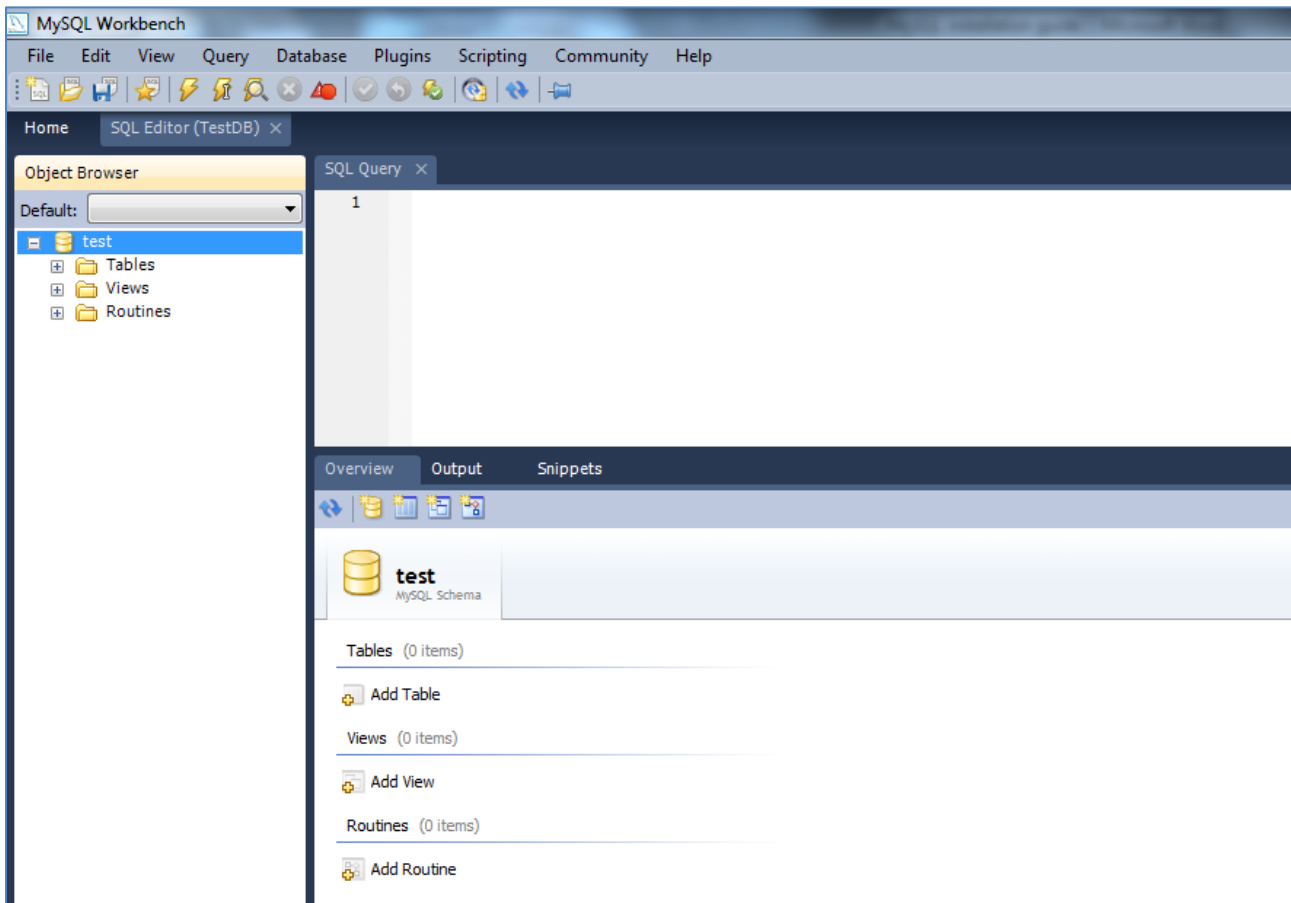

Click "OK".

4. In the Workspace of MySQL Workbench select the database connection.

5. Double-click on it and SQL Editor for selected DB connection will appear.

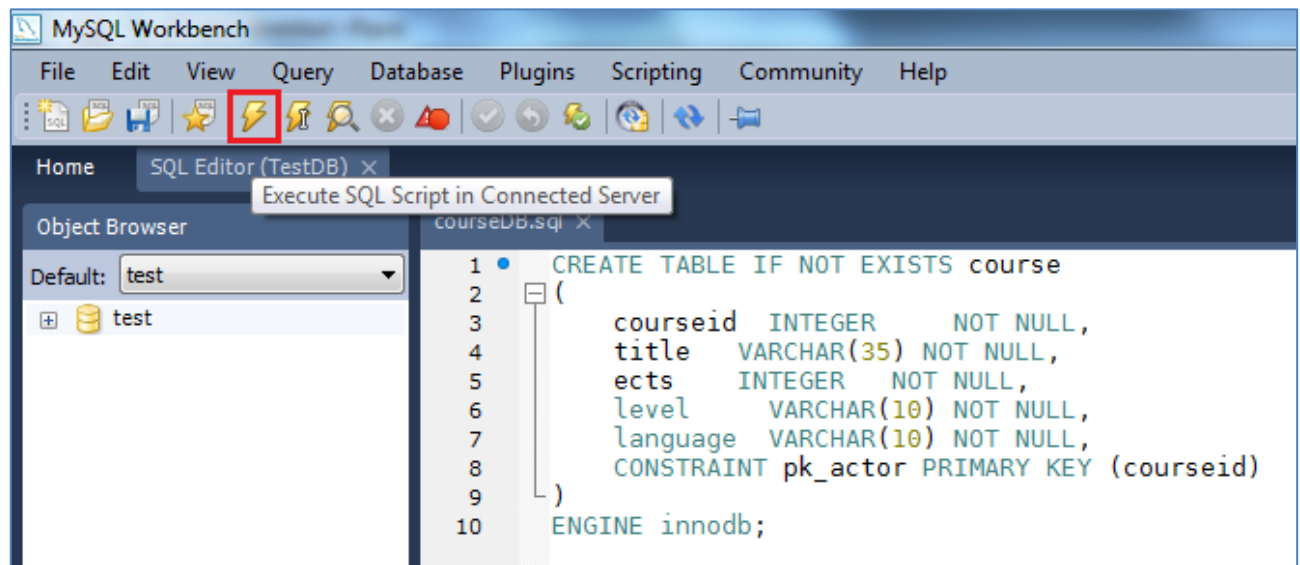

### 2.2.2 Loading an example database

1. Open a Database connection as described in 2.2.1 section.
2. In "Object Browser" from the dropdown select default database. In the example database "test" is selected.

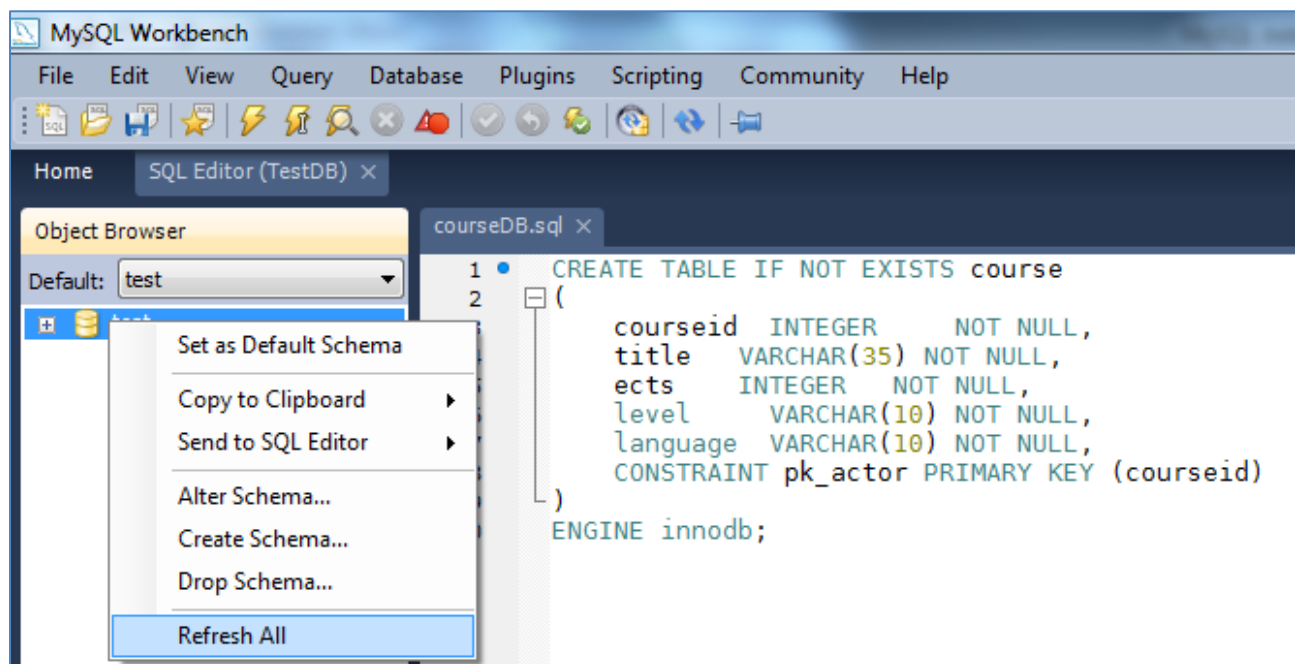

3. Download "courseDB.sql" file from the course webpage. This file contains SQL commands to create DB table with the name "course".
4. Select "File > Open SQL Script File", select the downloaded "courseDB.sql" file and click "Open".

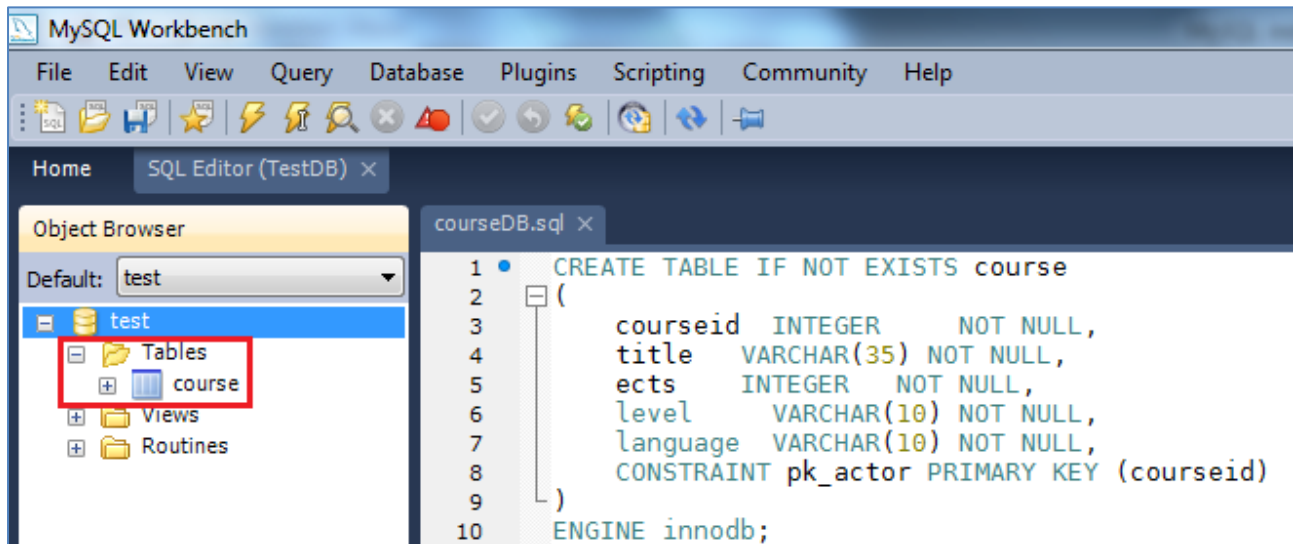

5. In the menu bar click on "Execute SQL Script in Connected Server".

6. Right-click on the database name in "Object Browser" and click "Refresh All".

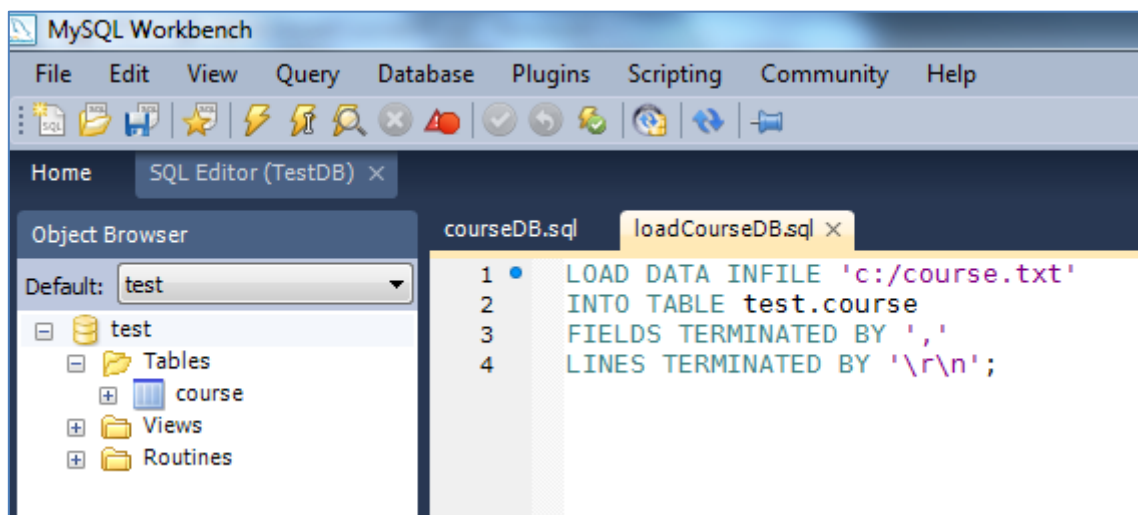

7. In the selected database “course” table will appear.

### 2.2.3 Populate database with data

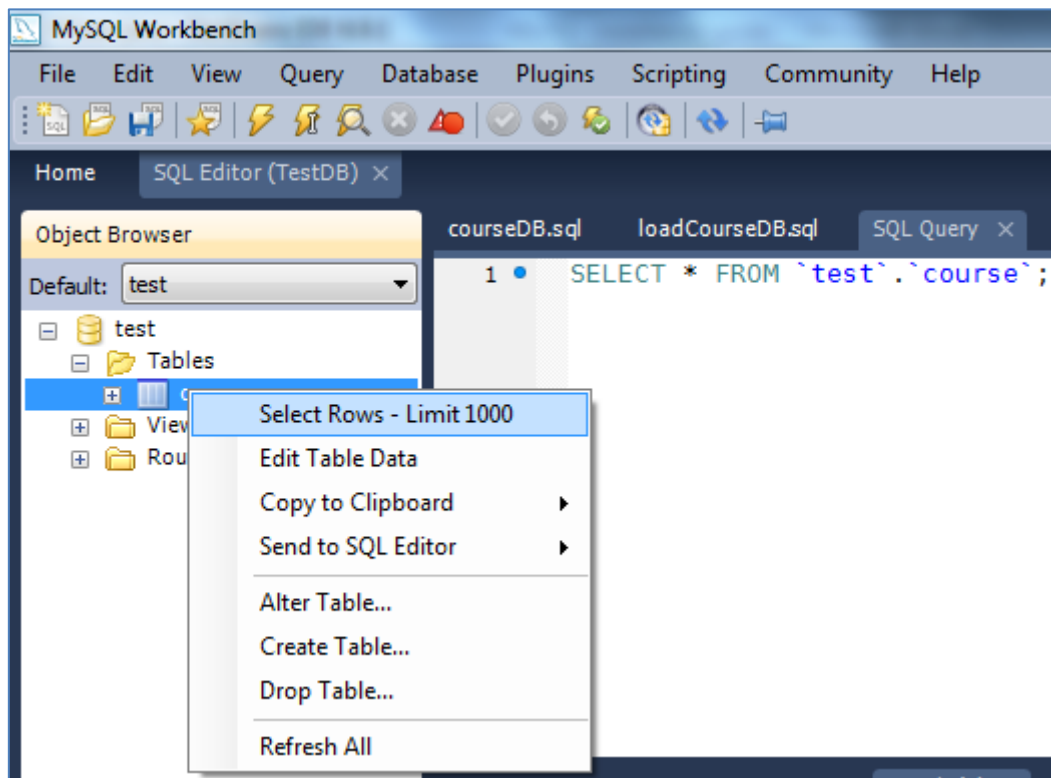

1. Download files from course page:
  - loadCourseDB.sql - file contains SQL commands for populating DB table with data from specified input file.
  - course.txt – data file for the “course” table (If you’re curious, you can open this file with a text editor to see what it contains).
2. Open “loadCourseDB.sql” SQL script file with MySQL Workbench, as described in Section 2.2.2.

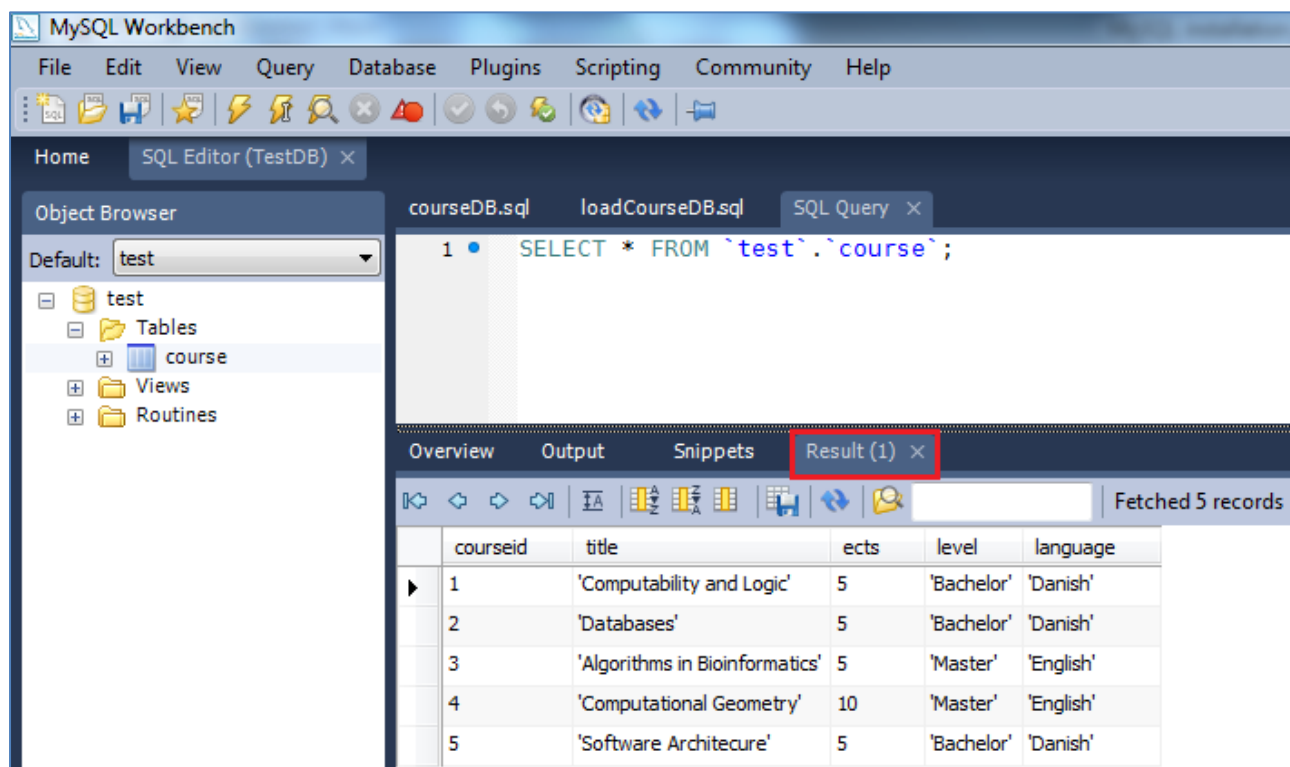

3. Before executing the script:
  - In the line “LOAD DATA INFILE” specify the location to which you downloaded the “course.txt” file (“c:/course.txt” in the example);
  - If you used the suggested names, you do not need to change anything else. If you chose a different name for the database or the table, change line “INTO TABLE test.course” accordingly, i.e. name for table “course” in “test” database.

Click “Execute SQL Script in Connected Server”.

- Right-click on the table name "course" and select "Select Rows - Limit 1000".

- The result set with five records (= five lines in the table) will appear (as in the text file).

Congratulations! You have successfully installed and tested MySQL and the Workbench!
